

CONTACT MEMO

Date: September 11, 1997
Contact: Harold Meyer, Water Resources Management, Inc.
Setting: Lunch Meeting in Sacramento

Harold Meyer contacted me to suggest that we meet for lunch to discuss groundwater modeling issues for CALFED. Our discussion centered around the various types of computer models that are available to address surface and groundwater issues. Meyer's company specializes in these types of models and he believes that his current model would accommodate CALFED's modeling needs much better than the other models available, including DWR SIM.

We discussed how groundwater parameters could be incorporated into an overall model, and what some of the problems and obstacles might be in doing that. I answered some questions regarding CALFED's groundwater program. We agreed to meet again after I received additional information regarding his model and after I discussed it with the appropriate people at CALFED.
